

Summary of my placement in REE Models !

I made my internship in a company named "REE modèles". This company makes small scale model trains. This is a small company because there are only 7 people working in it, but it is a big company for the small scale model trains world.

I found my internship in a show named RailExpo, in November 2013, where REE were exposing their new models. This show room is one of the biggest train modelism show of the year, it takes place in Cergy Pontoise.

During my internship I had to make a flat car model that is planned to go with an other model that have been drawn before. For this one I had to make the entire model, which means the CAD, the plans and all datas going with that.

This project took the biggest part of my job time because I had to draw 6 different versions of this model. And more than that I was working with a new CAD software which I never used before. So I had to learn how to use it !

Then for the end of the internship I just drawn two parts for small trucks that they have also drawn before.

The special part of my internship was that I was doing it in home office, which means that I was working from my home most of the time. I was just seeing them one or two days a week. But I was also talking with the employee with whom I worked every day by Skype. Most of the time we were sharing our screens, and so he was able to check my drawings by seeing my screen without me having to send the file by mail all the time.

Then after the internship I worked for them in July and I made some more versions of the flat car model !

I should work again for them around December when they will launch a new project which is not among their top project.
